NACVIEW

INSTALLATION GUIDE

Content

Introduction

The NACVIEW Installation Guide is a document that outlines the steps user must follow to properly install the NACVIEW system.

The system is available in two versions:

- as software for a virtual machine,
- as a physical machine with the installed software.

The software installation consists in the successive activation of two installers. The first one is the CLI installer, which defines the basic parameters of the system.

Then, the WWW installer is launched, where the user configures more advanced parameters. Both processes are described in this document.

CLI Installer

After logging in to the server console, the CLI installer login window will appear. Log in using the details below.

> Default system login details:
>
> login: admin
>
> password: NACVIEW

☞   To increase system security, it is recommended to change the default password.

The installer main menu should appear on the screen. Select the Settings option by typing the appropriate number from the menu:
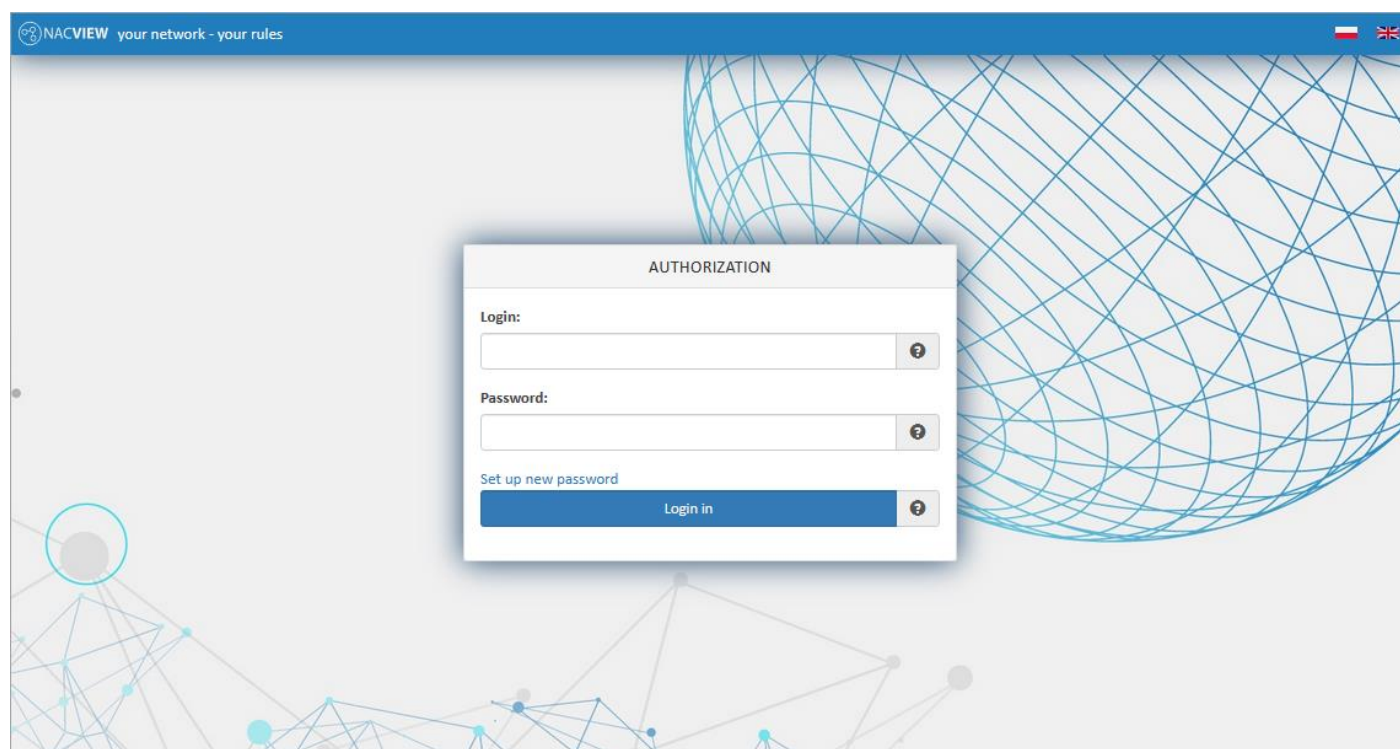

Complete the displayed form, specifying the parameters:

- Hostname - server name,
- IP address - server IP address,
- Prefix Netmask - subnet mask (in bits),
- Nameserver - DNS server (if you add several DNS servers, separate them with a space),
- Values for search - search domains,
- NTP - NTP server (when adding several NTP servers, separate with a space).

After confirming the set parameters with the *Enter* button, a summary will appear on the screen. If all the data is correct, type "*y*" and press *Enter* again. Exit the installer by selecting the digit from the main menu that corresponds to the *Exit* option.
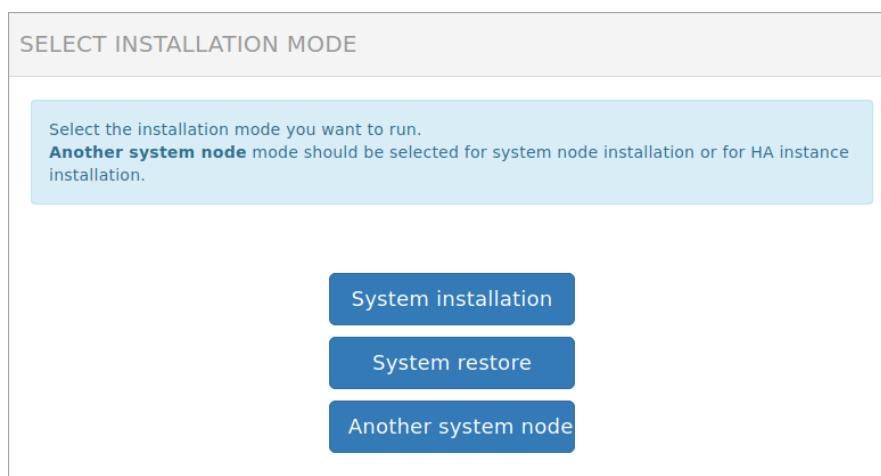

WWW Installer

After completing the installation process using the CLI Installer, log in to the web installer to finish the system installation. To do this, use the IP address defined in the CLI configurator, login and password for the administrator account.
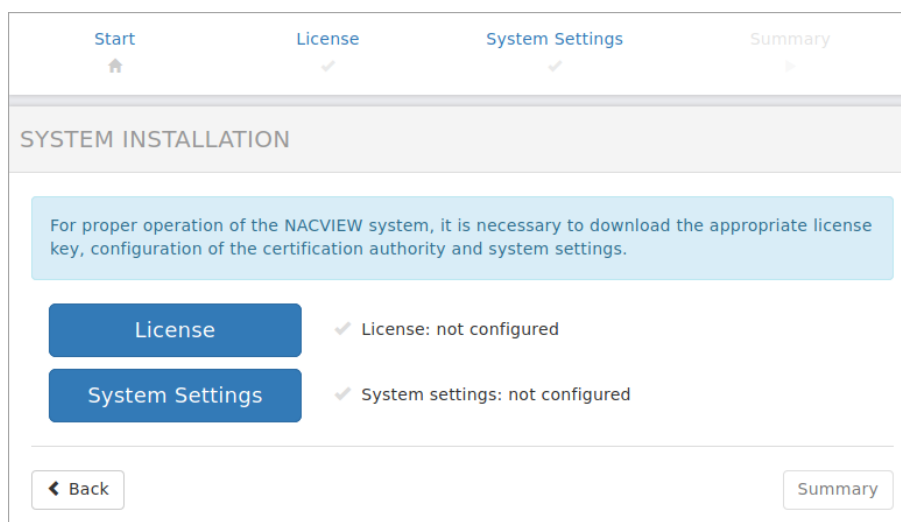

Enter "https: //" in the browser window and the IP address defined in the CLI installer (e.g. https://10.10.10.1). The login for the default administrative account is admin@nacview.com. The default password is NACVIEW.

After logging in, the installation mode selection window will appear. To go to the WWW Installer, click the *System Installation* button.

In the displayed window there are two buttons that correspond to the stages of the installation process: *License* and *System Settings*.

☞ Each of the configuration steps can be started at any time during the installation process. You can also return to each of them at any time and change the information entered.

☞ After completing both steps you will be able to go to the summary page and install the entered parameters.

License

Click the *License* button and then the *License request*. Fill in all the fields of the displayed form and click *Confirm*.

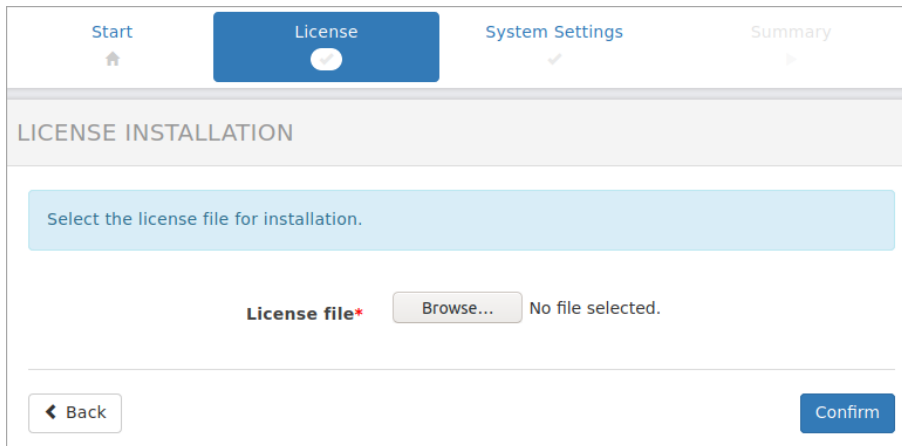

Download the completed form, then send it to request@nacview.com. Based on the data provided in the form, an appropriate license will be generated and sent to the e-mail address from which the form was sent.
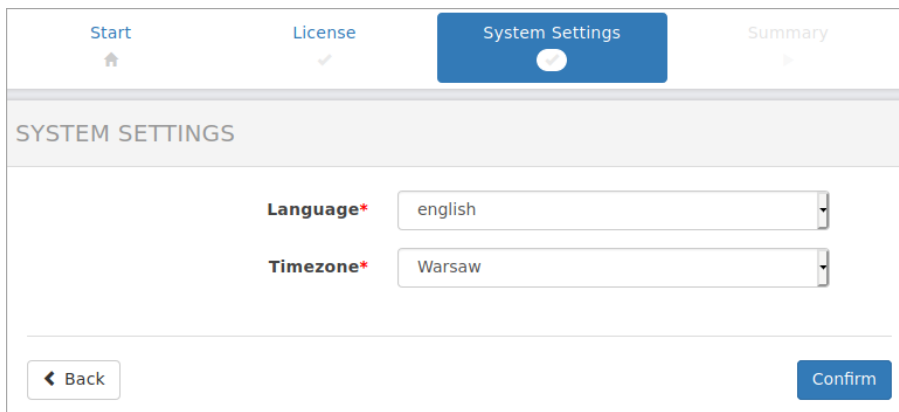

The received license file should be uploaded to the system. To do this, click *License installation* and select the appropriate file from the disk.

Click the *Confirm* button. After the license key has been installed correctly, the status: *configured* should appear next to the *License installation* button. Return to the *System Installation* window.

System Settings

The next stage of configuration is System Settings. Now you can define what the default language of the NACVIEW system will be, as well as select the time zone in which the system will operate.

After selecting the appropriate parameters, click the *Confirm* button and return to the *System Installation* window.

Summary

After completing all the configuration steps, the *Summary* button will be unlocked in the *System Installation* window. Click it.

The *Summary* window will display the information that has been configured in each step. If all the data is correct, click the *Install* button.
